

# The Five Questions To Ask Your Storage Provider About Replication

## 1. Can I replicate to other platforms?

Snap Enterprise Data Replicator can replicate data between SnapServers, and Linux, Unix and Macintosh servers.

## 2. How can I make sure my files are replicated with my limited bandwidth?

Snap EDR includes bandwidth throttling, byte-level incremental file replication and compression. With the combination of these three features, and depending on your rate of data change, your replications can be quite small and efficient. Snap EDR also uses check-pointing: if link is broken, the replication job resumes where it left off.

## 3. How can I make sure my data is secure during replication over the internet?

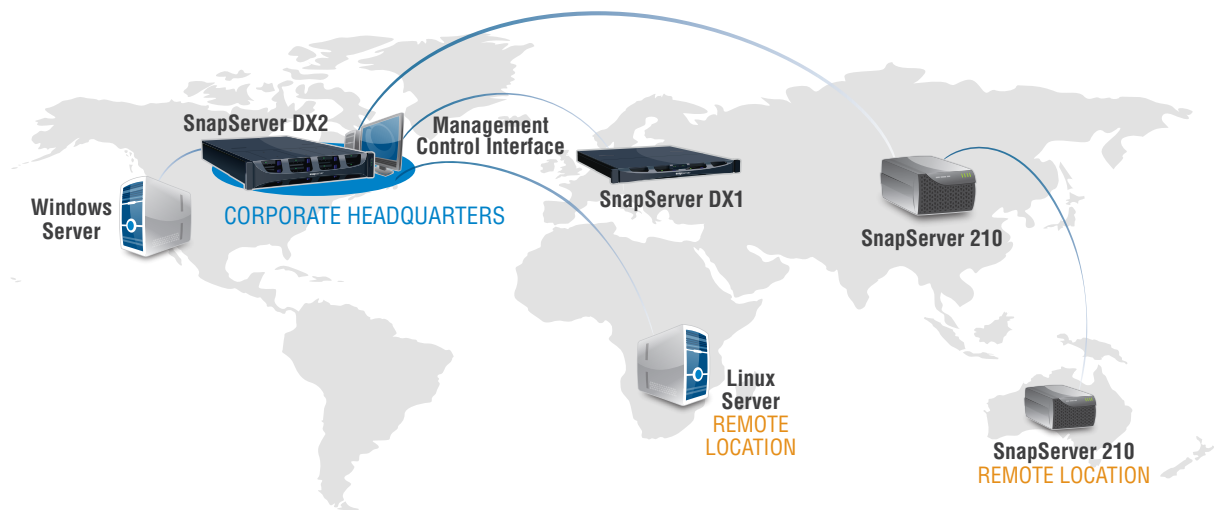

Snap EDR includes an encryption feature that keeps data secure during transmission over private and public networks. Snap EDR agents provide strong authentication utilizing digital certificates. Employ up to 256-bit over-the-wire encryption with digital signatures for proof of delivery.

## 4. What if I need to push files out to multiple locations or pull in files from multiple remote locations?

Snap EDR has the ability to distribute files from a corporate headquarters out to multiple remote locations. Conversely, Snap EDR can replicate data from multiple locations back to a corporate repository for safekeeping.

## 5. How can I manage multiple jobs at the same time? Isn't that cumbersome?

The centralized, browser-based Snap EDR management console can schedule and run hundreds of replication jobs across thousands of servers simultaneously.

## Sales Offices

### North America

125 S. Market Street  
San Jose, CA 95113  
USA  
Tel: 858.571.5555

### Asia Pacific

Level 44, Suntec Tower 3  
8 Temasek Boulevard  
Singapore, 038988
